25 th November, 2010

Dear Mr Windsor,

We strongly object to sending any extra Queensland water downstream to fulfil someone's green "feel good" ideas. Our Border Rivers already has 39% of water for consumptive use and leaves 61% for the environment, ie. flows past Mungindi, into NSW.

Can you tell me what percentage of a ML flowing past Mungindi actually reaches even Wentworth.

Where we sit writing this, it is 240 metres above Sea Level and is 3 days driving time to Lake Alexandrina.

Do these people wishing for more water for bully frogs, feral pigs and black snakes realise the human tragedy that they are inflicting on to Irrigation Communities from whom they take water?

Yours Truly
RW & GG Hamilton
