

Electoral division rankings: Census 2006 first release (2006 electoral boundaries)

Paul Nelson
Statistics and Mapping Section

Executive summary

This paper provides an analysis by Commonwealth electoral division of socio-demographic data from the first release of the *2006 Census of Population and Housing*. The electoral boundaries used in this paper are those applicable to the next federal election.

Introduction

This paper provides an analysis by Commonwealth electoral division of socio-demographic data from the first release of the *2006 Census of Population and Housing*. The electoral boundaries used in this paper are those applicable at the next federal election and they incorporate the recent redistributions in the Australian Capital Territory (December 2005), Queensland (November 2006) and New South Wales (November 2006).

First release 2006 Census data are available for a wide range of geographic areas that existed at the time of the Census, including the then current Commonwealth electoral division boundaries (2003 redistribution). However, first release 2006 Census data are not available for the new electoral divisions following the 2005 and 2006 redistributions. The second release of 2006 Census data, scheduled for late October, will contain additional geographic areas including the new electoral divisions. This publication has derived 2006 Census data for new electoral divisions using a concordance that links each 2006 Census Collection District (CCD) to a 2006 electoral division of best fit. The Australian Bureau of Statistics (ABS) will use the same concordance to create second release Census data for the new electoral divisions.

The electoral division data contained in this publication are based on CCD data that have been randomised by the ABS to ensure confidentiality of any cells where there are three or less respondents. There may be small differences between electoral data in this publication and the second release ABS Census data for electoral divisions because the ABS data will be based on data that has confidentiality adjustments (as described above) at the electorate level rather than the CCD level.

Data for each characteristic are presented in two tables. The first table lists each electoral division alphabetically and shows the simple value of the characteristic. The second table ranks each electoral division on the relative value of the characteristic and in most cases the characteristic has been standardised (usually as a percentage of some total measure) to provide a more meaningful measure. Each ranked table is sorted in ascending order. The political party that notionally holds each division is also shown in each table and this takes into account the recent redistributions.

This paper includes two tables covering the new topics of unpaid child care and broadband internet connection that were not available from the 2001 Census.

The second release 2006 Census data will include additional information covering the labour force, employment, occupation and education. An updated version of this paper will then be published with tables covering the additional information.
