Topic: 2016 Corporate Plan – sensitivity analysis FTTN

Senator Urquhart, Anne asked:

Exhibit 14 of the 2016 Corporate Plan states, in regards to the FTTN rollout, that every 7 month delay has a \$1 billion impact on funding. Please outline all the assumptions underpinning this statement – this should include pre and post delay RFS profile, APRU assumptions, residential take-up rate and any other factors. The mathematics of how this figure was determined should be spelled out and explained clearly.

#### **Answer:**

A 7 month delay in the FTTN rollout would result in 7 fewer months of steady state revenues being received within the period leading up to peak funding. In approximated values, the Corporate Plan 2016 sensitivity was calculated based on a final 3.3 million FTTN activated premises delayed for a period of 7 months at an ARPU of \$47.
