

Submission on Youth Suicide

This is my submission on youth suicide as a near victim when I was a teenager. I have no training in this field, just 40 years of life's experiences.

First, I do not see Suicide as a negative, we all would like some control over our deaths when we feel we have lost control over our bodies and a painful death is certain. Young people trying to escape lives of pain is the problem.

Society

I suspect many people have contemplated suicide sometimes in their lives. The fact that so many teenagers have considered killing themselves points to a sick society. And if you step back and take a long open look at society you will see it plain as day. We live in a society that "mass produces" children like widgets in a manufacturing plant. When a company or society goes for Quantity rather than Quality it's not surprising many will be rejected. We live in a society where anyone can become a parent, even very sick people. When this sickness is genetic, generations of children will be infected. If this sickness is sexually oriented then the child won't find out about it until they reach puberty (one possible reason for high teenage suicide). If the sickness is, adults looking to use children to satisfy their own needs in life then this attitude needs to be exposed and these parents need re-educating. How many "loser" adults become parents just to use children to bring some purpose in their own lives? OR hide their own sickness by pretending to be a "normal" parent? This needs to be strongly looked at as I believe it's a major contributor to child suicide. Adults who see children as instant friends – instant loved one – instant purpose for life. – instant acceptance as "normal" as a parent Etc.

With animal reproduction, only the lower forms of life use the mass production method, not caring that many will die but a few will survive. Advanced forms of life mostly use the Selective breeding / group protection method. Where only the best / fittest breed but the whole group protects the offspring. I believe we need to adopt this form of reproduction. I know this might sound strange to selfish humans but isn't that part of the problem? Satisfying the selfish whims of adults and ignoring the genetic well being of children?

Once children are mass produced they are then sent to schools, where more than just a education is administered. This is where the "pecking order" is mercilessly enforced and non-"normals" are rejected. This is quite strange because children themselves seem to instigate this pecking order based on a number of sources – parents attitudes, older siblings attitudes, what children learn from TV, Music , and other peers. This is where teenagers can be rejected, isolated and all but killed – suicide being the self-inflicted manslaughter.

Church and the State

For eons, Religions and the state have promoted / encouraged mass production of children for many reasons – to fill armies, to increase tax payers, to increase congregations etc etc etc. This is the 21 century, maybe we need to rethink how society reproduces children.

The Federal Governments \$5,000 Baby bonus is typical of governments who don't care about children and just see people as numbers, future tax victims to pay for welfare leaches. How many sick people, druggies, criminals, dead beats etc are now parents just to get the \$5,000 free give away (of other peoples stolen money). How many more children have been abused or are dead because of this policy. Vote buying and Socialism gone mad!

The numbers

Does Suicide rates include car crashes, a common method for teenagers to kill themselves?

Does suicide rates include the use of drugs, I suspect a MAJOR factor in pushing teenagers over the edge!

Suggested changes

- (1) Remove the Mass Production attitude towards children. Some people should never become parents. All newly born children and their parents need to be genetically tested to expose closet sick parents. This is a large step to take but just recognising the fact that mass production is the underlying cause of many problems for children, especially the “hiding” of sick adults.
- (2) REMOVE the governments vote buying / child abusing \$5,000 baby bonus!
- (3) Young teenagers need to be educated that if one of their peers is genetically different to the “norm”, it’s not their fault. They are just victims of selfish adults / a mass production – uncaring – criminal society / government.
- (4) Every child NEEDS to be reviewed by trained professionals at certain stages of their lives to see how they are developing, especially at school. Bullying could be a symptom of an underlying problem, and that bullying could lead to suicide by another student.
- (5) Rejected children who are bullied at school need to be given contact details of a nearby support group (other rejected kids) to hopefully provide new friends and support.
- (6) Teenagers need to be educated on “how to make money”. Financial security being such an important factor especially for young men, on feeling a “success” rather than lost in the welfare maze of hopelessness and despair. Training on “Share trading” and “running a small business- EBAY?” should be mandatory subjects in school. So even if they lose their job, they still have something to fall back on.
