

To Senators on the Senate Select Committee on Climate Policy,

It is time for Australia to show the world we are intelligent and aware that the way we are currently living is unsustainable and demonstrates nothing more than greed. We need to stop coal fired power immediately and use the Government subsidies given to the coal industry to create 'green' jobs now (as per the Greens paper on 'Green employment opportunities for the Hunter.' Drastic action is required NOW. In fact, drastic action is required ten years ago. How long are our elected representatives going to be allowed to take us to the brink of extinction? Wake up Australia.

I'm doing all I can personally and am desperately seeking everyone to do the same.

Hurry! Before it's too late!

Alan Glover
