

To Senators on the Senate Select Committee on Climate Policy,

If this is going through the Greens MP's to the Senate Select Committee on Climate Policy then I would like to put in my few bobs worth.

For a start I think the Greens party are a shower of garbage. If we had them running the country we would all be in horse and carts. I find their ideas totally out of kilter with the world as it is today. I only hope they go away for ever. Bob Brown I cannot stand . He has been around too long and all he wants for Tassie is wilderness. OK, but the rest of Australia supports Tassie financially. What they need is a bit of industry so they can at least pay something towards their existence. On the matter of emissions trading. This is another joke. When Australia contributes hardly anything to carbon pollution compared to other countries. Do you really want me to believe that if Australia does something that India and China are going to follow on to any extent. I have travelled a lot and in China all they are interested in is their next meal. All we will achieve is sending our country broke and the world will be just as polluted.

I am a great fan of Andrew Bolt, because he is the only guy I think that tells it how it is. Pity there were not more like him and less of the people jumping on the band wagon.

Do we really know that all this carbon reduction business is going to make the world a better place. Green Party - Please go away , and do not send me any more of this sort of rubbish. I would rather have some sort of global warming (if there is such a thing) than go along with any of your stupid suggestions.

Name: Thomas Fouracre
