

To Senators on the Senate Select Committee on Climate Policy,

I want a much higher target for ETS than 5%. I also want a carbon tax that applies to all consumers. These environmental issues are urgent. There will need to be an impact on some industries from these measures because there needs to be a contraction of the industries that generate large greenhouse gas impacts. We need to stop trashing this planet. We should not be investing public resources in measures that allow polluting industries to keep on polluting. As a nation we need to move fast to being carbon neutral. As our leaders, please act seriously on this.

Thankyou.
