

To Senators on the Senate Select Committee on Climate Policy,

Carbon dioxide is not a pollutant. Please give up the ETS as a bad idea.

An ETS is complicated financial engineering that will increase prices, but will not save the environment. It:

Will not change global temperatures;

Will force Australian jobs overseas; and

Will make Australians poorer; while it is richer, not poorer nations that are better able to protect their natural environment.

In other words the ETS is a tax grab sold by the greenhouse propaganda industry.

Name: Michael Burston
