

To Senators on the Senate Select Committee on Climate Policy,

All I really am is a member of a family of 4. While I have all the modern comforts in my house I have invested into my new home, Compact CFL downlights, a \$5000 Solar Hot Water System and after rebates a \$9,200 1.7KW Solar Grid Connect system. This investment has led my household to reduce its carbon emissions by 25% in Summer (Large Aircon) to 60% in Spring and Autumn. As a worst case scenario I more than meet the current targets set, yet my saving can be giving to a company to pollute more. How does that help the earth and my childrens future? It doesn't. I'm happy to invest in clean technology and do our part, I can sleep better at night know I'm trying hard, but then find it dissapointing the credits get traded to a polluter.

The public are willing to do their bit, the government needs to stop bending to the coal and oil industry.

Kind Regards

Andrew Bagnara
