

I live in the beautiful Dandenong Ranges. Unless we reduce the effects of climate change, it is expected that by 2050, the conditions of black saturday, or the likelihood of seeing fires will increase by 300%. True. 2007 report by Australian institute of climate change. How long will the Dandenongs and its residents exist for?

Please reconsider your weak policy. Perhaps you are forgetting that there a very small children in the world and they need it left as it was when you came in.

We are submitting this into our Royal Comission Submission on behalf of 800 households resulting from our community survey respondents concerned by bushfire safety issues. One issue of which is climate change. No water, more fuels in the forest that dont rot, more fuel, more intense fire. This is hitting us on a small level already.
