

To Senators on the Senate Select Committee on Climate Policy'

The Carbon Pollution Reduction Scheme proposed by the Government is Ruddy useless. And Penny Wong is a BIG DISAPPOINTMENT. Why won't the Government face up to reality instead of pandering to the coal industry and giving the worst polluters in the country billions of dollars of compensation. Until the government and industry get it right, with the best will in the world any efforts made by individuals are useless. Please think of the future of the planet, our country, and our children.

Ann Johns
