

To Senators on the Senate Select Committee on Climate Policy,

I suggest the entire concept of emissions trading be scrapped until::

- 1) We know what the rest of the world is doing.
- 2) We are certain any scheme will not impact jobs and wealth.
- 3) Times improve and the capacity of citizens improve so additional costs can be absorbed.
- 4) A plan is developed to subsidise self-funded retirees that reflects the subsidies which may be given to the community at large.
- 5) Don't be pressured by the Greens to do something stupid - too much is at stake - ensure Australia maintains its wealth and remains competitive. Australia's omissions on a global scale are minor.
- 6) A global consensus is developed.

Regards,
Ed Sulway
