

I was highly disturbed and disgusted to learn of the radioactive waste management act that makes and turns citizens of this nation into a dumpster for capitalism... It is a disgrace and makes me sick to the stomach to even be a part of this country, who could treat its own citizens with such disrespect.

The government must repeal this act because:-

It allows nuclear waste to be dumped in the NT without consent from traditional owners

overrides territory laws that prohibit transport and storage of radioactive materials in the NT

removes rights to "procedural fairness" and removes rights of appeal under the administrative decisions act

it is international standard to involve communities when making decisions about nuclear facilities

the sites were chose for political and not scientific reasons

it is labor party platform to repeal the CRWMA

Kevin Rudd committed to keeping all election promises, which this was made by Kim Carr & Trish Crossin on 27/09/08

Labor called this legislation 'sordid', 'shameful' and 'arrogant' but have yet to take any action

This country is a democracy and there must be a democratic approach to radioactive waste management. We can not make any part of this land a dumpster for sickening nuclear waste, especially when intruding on traditional land - how dare any legislation of this country imply that they have right over Aboriginal land to dump radioactive waste. Have we not learnt anything from our past

Labor must take action, and finally make this country proud to have elected them.

Thank you and I look forward to hearing about the repeal of the legislation, as promised.

Kind Regards
Alana Parrott-Jolly
