Dear Secretary and Committee,

I would like to add my support for the proposed Feed-In Tariff Bill.

This Bill would give much needed support to developing the renewable energy industry in Australia, - I particularly like the wide scope of renewable energy generators, - the Queensland one only supports Solar, for instance, which is a bit short sighted, and also that it is a Gross not Net tariff.

I hope that it will replace the differing State versions as it seems superior in every respect, and will make it easier for successful technologies to develop through access to the national market. It is to be hoped that this Bill has a swift and successful passage through the house, you have my total approval.

**Yours Sincerely,
Geoff Thomas,
Advanced Wind Technologies,
Kuranda**
