

Folks,

Please find attached documents regarding the case for, and design of, a Feed-in Tariff (FIT) for Australia from the Alternative Technology Association web site.

<http://www.ata.org.au/projects-and-advocacy/feed-in-tariff-for-solar-systems>

If implemented, a FIT of \$0.60 on gross output would allow the solar industry to grow and bring Australia into line with the rest of the world. The QLD government "Nett FIT" is an insult to our intelligence as only people in rare circumstance (e.g. no-one at home during the day) would be paid any benefit.

I urge you to consider the attached in a favourable light. It would also request that no cap be placed on the generating capacity of a solar/wind micro-generation system. Please allow this to be a decision based on the financial situation of the system owner.

Climate change is a problem that is easier and less costly to tackle the sooner and the faster we begin to address it – so let's get moving!

Thanks

John Sheehan
