

From Glenn Moran of Eastland Energy

The following days after the means testing had come in, I had lost 4 solar power grid system jobs and \$25,000.00 in profit. The customers how make over \$100K a year put in more than 1kw of solar panels

Normal 2kw to 4kw of solar panels and the \$8,000.00 goes along way reducing the cost of the installation and with a bigger solar grid system more saving on greenhouse gases.

I would like to the solar rebate be set a \$16,000.00 for people under \$100k and \$8,000.00 for people over \$100k. To make a change we need solar gird systems to be 2kw or greater.

With all the silicon sand we have in Australia we could be making the silicon that goes in to the solar cell and be making up to \$11,000.00 a ton and coal is \$300.00 a ton.

Best Regards
